Introduction

This is a [quarto](#) document that is rendered through typst into a PDF document. Working with Typst in Quarto is covered [here](#). You can mostly use markdown syntax to author your document. This demo document showcases some of the common formatting options available in markdown along with some typst specific features. For some features and more control, typst code is used.

The outline at the beginning of the document is generated using the typst function

```
`#outline()`{=typst} . A page break is added using `#pagebreak()`{=typst} .
```

Text formatting

Headings

```
## Level 2 heading
### Level 3 heading
#### Level 4 heading
##### Level 5 heading
##### Level 6 heading
```

Character styles

Markdown	Rendered
<code>_Bold text_</code>	Bold text
<code>_Italic text_</code>	<i>Italic text</i>
<code>~~Strikethrough~~</code>	Strikethrough
<code>H~2~0</code>	H ₂ O
<code>x^2^</code>	x ²
<code>--</code>	—
<code>---</code>	—
<code>[link](r-project.org)</code>	link

Here is how to add formatting using typst functions:

Typst	Rendered
<code>`#underline[text]`{=typst}</code>	<u>text</u>

Typst	Rendered
<code>`#highlight[text]`{=typst}</code>	text
<code>`H#sub[2]O`{=typst}</code>	H ₂ O
<code>`x#super[2]`{=typst}</code>	x ²
<code>`#badge([badge])`{=typst}</code>	badge
<code>`#badge-primary([badge])`{=typst}</code>	badge
<code>`#badge-secondary([badge])`{=typst}</code>	badge
<code>`#badge-tertiary([badge])`{=typst}</code>	badge

Here is a rectangle ``#rect(width: 1cm)`{=typst}`

Let's generate some random text ``#lorem(10)`{=typst}`

Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do.

This text has a citation J. Smith and J. Doe [1]. The bibliography is listed at the end of the document.

Blockquote

```
> This is a block quote. This
> paragraph has two lines.
>
> 1. This is a list inside a block quote.
> 2. Second item.
```

This is a block quote. This paragraph has two lines.

1. This is a list inside a block quote.
2. Second item.

Line block

Line block preserves spaces and new lines.

```
| This
|   block
```

```
|      preserves
|      formatting
```

This
 block
 preserves
 formatting

Rule

A horizontal line can be created using three or more `*` or `-`.

```
***
```

Footnote

An example of footnote reference¹

Code formatting

Verbatim code is text formatted using monospaced font intended as code. Verbatim code can be defined inline where ``date()`` looks like `date()`.

Code can also be defined inside code blocks.

```
```
date()
```
```

```
date()
```

Source code, ie; code that is highlighted or executed in a quarto document is not covered here.

Lists

Unordered

Unordered lists are created using dashes.

¹That reference refers to this footnote.

- Bullet 1
- Bullet 2
 - Sub-bullet 2.1
 - Sub-bullet 2.2
- Bullet 3

- Bullet 1
- Bullet 2
 - Sub-bullet 2.1
 - Sub-bullet 2.2
- Bullet 3

Ordered

Ordered lists are created using numbers.

1. Point 1
2. Point 2
3. Point 3

1. Point 1
2. Point 2
3. Point 3

Multiple Lists

- ```

::: {}
1. Point 1
2. Point 2
:::

::: {}
1. Point 1
2. Point 2
:::

```

1. Point 1
  2. Point 2
- 
1. Point 1
  2. Point 2

# Images

Images can be inserted using plain markdown or HTML directly. Plain markdown can be embellished with custom quarto adjustments to modify aspects of the image. Clicking the image opens the image in a lightbox.

## Using Markdown

Using regular markdown.

```

```

The dimensions are based on image and/or fill up the entire available space. You can control the dimension as shown below.

```
![This is a caption](assets/typst.png){width=30%}
```

Figure 1: This is a caption

This image above is now 30% of it's original width.

## Figure layout

```

::: {#fig-mylabel layout-ncol=2}
![[Caption for figure 1](assets/typst.png){width="40%"}

![[Caption for figure 2](assets/typst.png){width="40%"}

These figures are interesting.
:::

```

(a) Caption for figure 1

(b) Caption for figure 2

Figure 2: These figures are interesting.

More figure options and layouts are described [here](#). Cross referencing described [here](#).

## Using Typst

```

```{=typst}
#image("assets/typst.png", width: 30%)
```

```

```

```{=typst}
#figure(
  image("assets/typst.png", width: 30%),
  caption: [This is the typst logo.]
)
```

```

Figure 1: This is the typst logo.

For more information on figures, see [here](#). Images generated through code is not covered here.

## Math expressions

Some examples of rendering equations.

```
$e^{i\pi} + 1 = 0$
```

$$e^{i\pi} + 1 = 0$$

```
$$\frac{E \times X^2 \prod I}{2+7} = 432$$
```

$$\frac{E \times X^2 \prod I}{2 + 7} = 432$$

```
$$\sum_{i=1}^n X_i$$
```

$$\sum_{i=1}^n X_i$$

```
$$\int_0^{2\pi} \sin x \sim dx$$
```

$$\int_0^{2\pi} \sin x \, dx$$

```
$$\left(\sum_{i=1}^n i \right)^2 = \left(\frac{n(n-1)}{2} \right)^2 = \frac{n^2(n-1)^2}{4}$$
```

$$\left( \sum_{i=1}^n i \right)^2 = \left( \frac{n(n-1)}{2} \right)^2 = \frac{n^2(n-1)^2}{4}$$

```
$$\begin{eqnarray} X & \sim & \mathrm{N}(\theta, 1) \\ Y & \sim & \chi^2_{n-p} \\ R & \equiv & X/Y \sim t_{n-p} \end{eqnarray}$$
```

$$X \sim N(0, 1)$$

$$Y \sim \chi_{n-p}^2$$

$$R \equiv X/Y \sim t_{n-p}$$

$$\begin{array}{l} P(|X - \mu| > k) = P(|X - \mu|^2 > k^2) \\ \leq \frac{\mathbb{E}[|X - \mu|^2]}{k^2} \\ \leq \frac{\text{Var}[X]}{k^2} \end{array}$$

$$P(|X - \mu| > k) = P(|X - \mu|^2 > k^2)$$

$$\leq \frac{\mathbb{E}[|X - \mu|^2]}{k^2}$$

$$\leq \frac{\text{Var}[X]}{k^2}$$

## Tables

For simple cases, tables can be manually created in markdown.

```
speed	dist
4	2
4	10
7	4
```

| speed | dist |
|-------|------|
| 4     | 2    |
| 4     | 10   |
| 7     | 4    |

Table caption and numbering can be added as such:

```
speed	dist
4	2
4	10
7	4
```

```
: These are exciting results. {#tbl-mylabel}
```

Table 1: These are exciting results.

| speed | dist |
|-------|------|
| 4     | 2    |
| 4     | 10   |
| 7     | 4    |

Tables can also be generated through code which is not covered here.

More information about [tables](#).

## Icons

### Fontawesome

To use [fontawesome](#) icons as shortcodes, quarto extension [fontawesome](#) needs to be installed.

Icons can be placed using shortcodes.

```
{{< fa lightbulb >}}
```

```
{{< fa exclamation >}}
```

```
{{< fa clipboard-list >}}
```

```
{{< fa comments >}}
```

```
{{< fa desktop >}}
```

```
{{< fa cloud >}}
```

```
{{< fa check >}}
```

```
{{< fa times >}}
```

```
{{< fa skull >}}
```

```
{{< fa skull size=2x >}}
```

```
{{< fa brands github >}}
```

### FontAwesome icons

[FontAwesome icons](#) are made available in this template. FA6 and FA7 are supported.

For more details on the Typst package that enables this, see [here](#).

| Typst                                                    | Rendered                                                                             |
|----------------------------------------------------------|--------------------------------------------------------------------------------------|
| <code>`#fa-icon("lightbulb")`{=typst}</code>             |  |
| <code>`#fa-icon("lightbulb", solid:true)`{=typst}</code> |  |
| <code>`#fa-icon("laptop")`{=typst}</code>                |  |

| Typst                                                            | Rendered                                                                           |
|------------------------------------------------------------------|------------------------------------------------------------------------------------|
| <code>`#fa-icon("cloud")`{=typst}</code>                         |  |
| <code>`#fa-icon("github")`{=typst}</code>                        |  |
| <code>`#fa-icon("exclamation-circle", size:15pt)`{=typst}</code> |  |

## Tabler icons

[Tabler icons](#) are made available in this template. For more details on the Typst package that enables this, see [here](#).

| Typst                                                                      | Rendered                                                                             |
|----------------------------------------------------------------------------|--------------------------------------------------------------------------------------|
| <code>`#tabler-icon("calendar")`{=typst}</code>                            |    |
| <code>`#tabler-icon("brand-github")`{=typst}</code>                        |  |
| <code>`#tabler-icon("map-pin")`{=typst}</code>                             |  |
| <code>`#tabler-icon("location")`{=typst}</code>                            |  |
| <code>`#tabler-icon("brand-mastodon")`{=typst}</code>                      |  |
| <code>`#tabler-icon("mail")`{=typst}</code>                                |  |
| <code>`#text(size:20pt,tabler-icon("calendar", fill:blue))`{=typst}</code> |  |

## Call-Outs

Call-Out blocks are explained [here](#).

```

::: {.callout-note}
This is a call-out.
:::

```

```

::: {.callout-warning}
This is a call-out.
:::

::: {.callout-important}
This is a call-out.
:::

::: {.callout-tip}
This is a call-out.
:::

::: {.callout-caution}
This is a call-out.
:::

```

**i Note**

This is a call-out.

**⚠ Warning**

This is a call-out.

**! Important**

This is a call-out.

**💡 Tip**

This is a call-out.

**🔥 Caution**

This is a call-out.

## Layout

### Span

```
[Content inside span]{style="background-color: gray"}
```

Content inside span

## Div

```

::: {style="background-color: gray"}
Content inside div
:::

```

### Content inside div

Divs can be nested like this:

```

:::: {.class}
::: {.class}
:::
::::

```

Both spans and divs support attributes in this specific order: identifiers, classes, and then key-value attributes.

```
[Content inside span]{#id .class key1="val1" key2="val2"}
```

## Hidden div

```

::: {.hidden}
Hidden content
:::

```

## Conditional content

```

::: {{.content-visible when-format="html"}}
Will only appear in HTML.
:::

```

```

::: {{.content-hidden when-format="html"}}
Will not appear in HTML.
:::

```

Conditional content is documented [here](#).

## Shortcodes

Shortcodes are sort of like quarto functions.

Two important shortcodes are `meta` and `var`. `meta` allows to read metadata from the yaml block in the current page or from `_quarto.yml`. Here are a few examples:

```
{{< meta title >}} Demo Report
```

Similarly, `var` allows to read variables from `_variables.yml` if it has been defined.

The `include` shortcode allows to add a child qmd document into a specific position in a qmd file.

Some of the custom shortcodes added with this template are:

```
{{< meta quarto_version >}} 1.8.25
```

```
{{< meta current_date >}} 18-12-2025
```

```
{{< meta current year >}} 2025
```

```
{{< meta current time >}} 19:30:33
```

Shortcodes are documented [here](#).

## Typst blocks

```
::: {.block fill="olive" inset="8pt" radius="4pt"}
```

This is a block with olive background and rounded corners.

```
:::
```

This is a block with olive background and rounded corners.

## General tips

- Use level 2 heading as the highest level

```
Section A
```

- Add custom css under YAML if needed `css: "my-theme.css"`
- Check out the [Quarto](#) website
- To add a bibliography, use the following:

```
::: {#refs}
```

```
:::
```

## Bibliography
